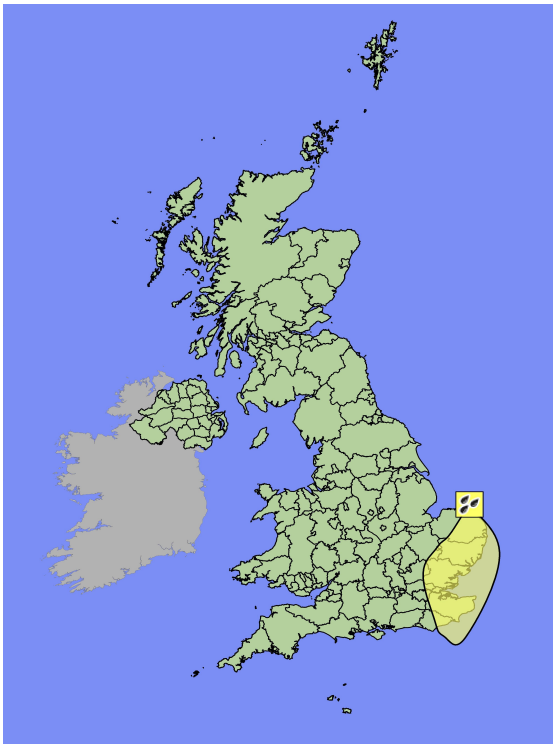
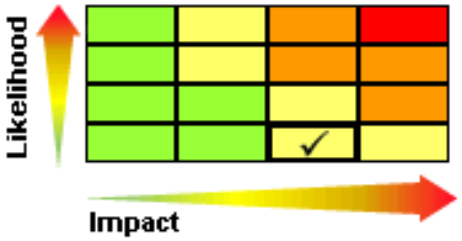
National Severe Weather Warning Service





Chief Forecasters Assessment
We continue to monitor a weather system that has brought heavy thunderstorms across France and the Low Countries. Whilst the rainfall in southeast England and East Anglia is not now expected to be as heavy as previously thought, there is still the potential for isolated spots to have 15 to 30mm in the next few hours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:00 on Tue, 23rd Aug 2011** until **15:00 on Tue, 23rd Aug 2011**

Further outbreaks of rain are expected to move north across southeast England and East Anglia. perhaps turning heavy and thundery at times this morning. Whilst many parts will see relatively modest rainfall amounts, the public should be aware that surface water flooding is possible locally. Rain should ease later this morning into the afternoon.
